magnETHical

“What I cannot create, I do not understand”

—Richard Feynman

1. In the spirit of Richard Feynman...
2. My master thesis is about building an NMR spectrometer
3. I'm Max and I'll be your host for today
4. Speaking of understanding...

There is not a lot of NMR research in the Global South

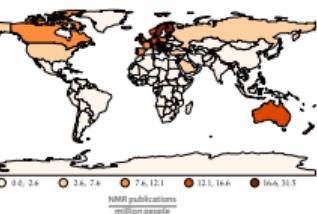

2023-09-12

magnETHical

There is not a lot of NMR research in the Global South

Reminder: What is NMR spectrometer

There is not a lot of NMR research in the Global South

Nuclear Magnetic Resonance

- Nuclei absorb radio waves at a certain frequency when inside a magnetic field
- The nuclei emit radio waves at that same frequency when excited this way
- $f \sim B_0$ and surroundings

2023-09-12

magnETHical

└ Nuclear Magnetic Resonance

- You: Understanding for own experiments
- The better we know the better we can use
- Push NMR development — better machines
- Transition: if not about you personally — more globally: applications

- Nuclei absorb radio waves at a certain frequency when inside a magnetic field
- The nuclei emit radio waves at that same frequency when excited this way
- $f \sim B_0$ and surroundings

NMR is used across various fields

- Research (Structure Analysis, Drug Discovery, ...)
- Medicine (Imaging, Diagnosis, ...)
- Industry (Process Control, Drug screening, ...)
- Education (Quantum Mechanics, Quantum Computing, ...)

2023-09-12

magnETHical

└ NMR is used across various fields

1. Some of you already know, but here are some reasons why NMR is useful

- Research (Structure Analysis, Drug Discovery, ...)
- Medicine (Imaging, Diagnosis, ...)
- Industry (Process Control, Drug screening, ...)
- Education (Quantum Mechanics, Quantum Computing, ...)

**Build an accessible
NMR spectrometer**

THE PARTS

THE PARTS

2023-09-12 *magnETHical*
└ The parts

Our goal is to build an accessible NMR spectrometer

2023-09-12

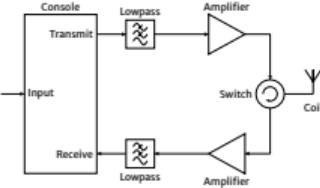

magnETHical

The parts

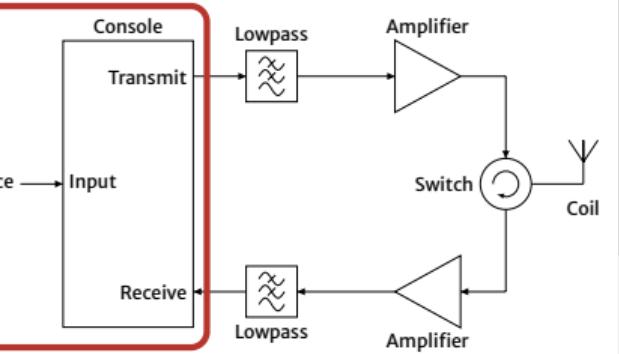

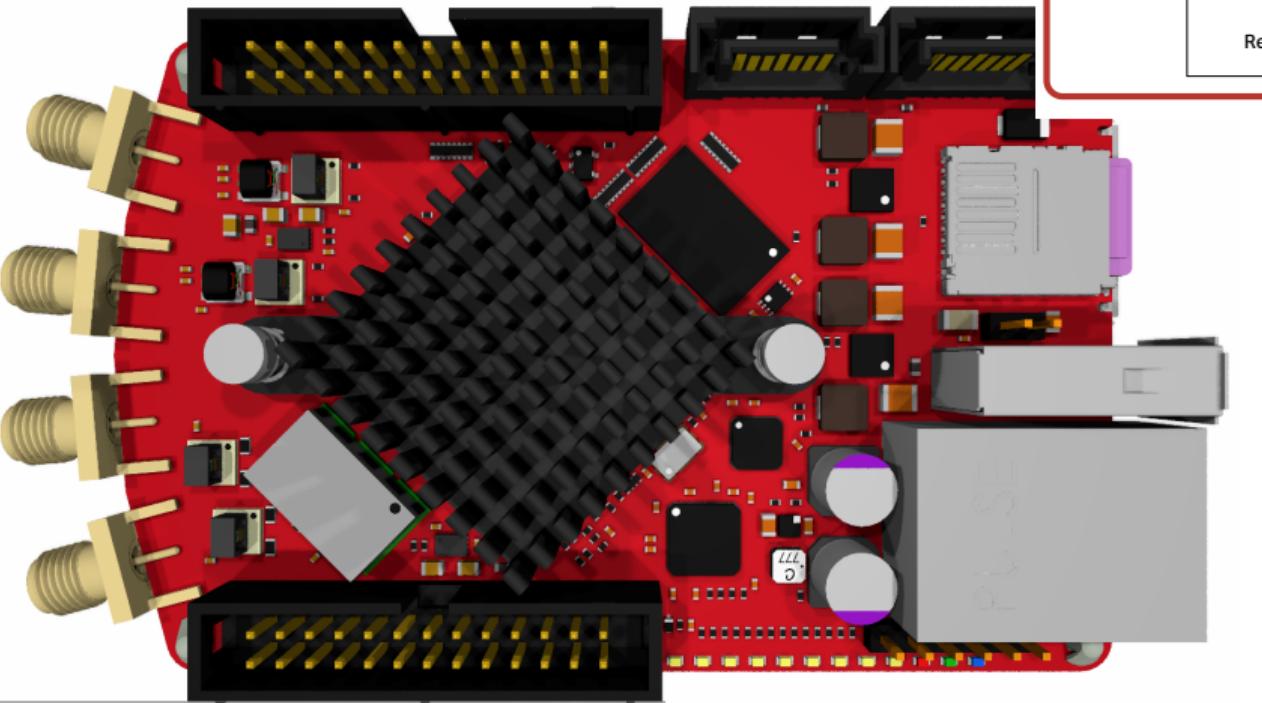

Console
Transmit
Lowpass
Amplifier
Switch
Coil
Input
Receive
Lowpass
Amplifier

1. Go through the parts left to right
2. Our switch only, others might include more analog processing

Our goal is to build an accessible NMR spectrometer

The console
is a ready-made FPGA board*

2023-09-12

magnETHical

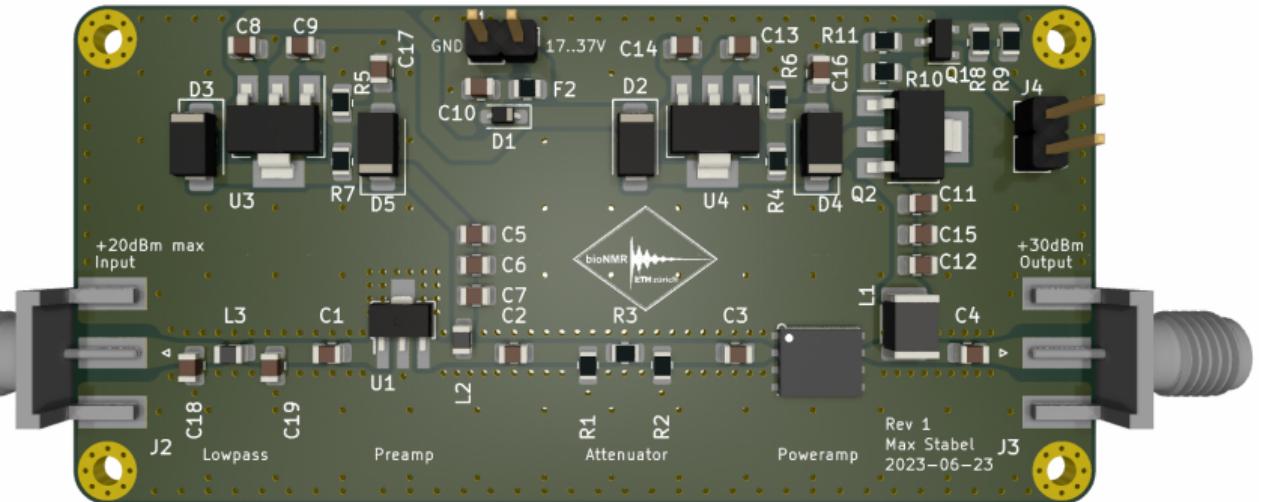

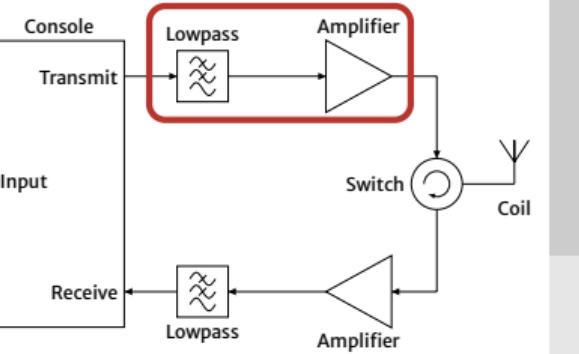

The parts

- FPGA
- SDR
- RF
- Power
- Console
- PC

The console is a ready-made FPGA board*

1. FPGA == programmable hardware, very fast
2. oversampling
3. CIC filter (decimation, low pass filter, moving average)
4. The signal needs to be filtered and then amplified: Next Slide

The power amplifier has two stages

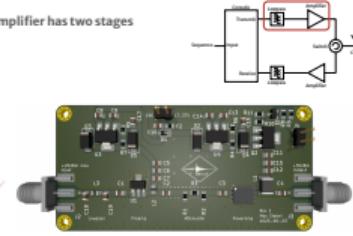

2023-09-12

magnETHical

The parts

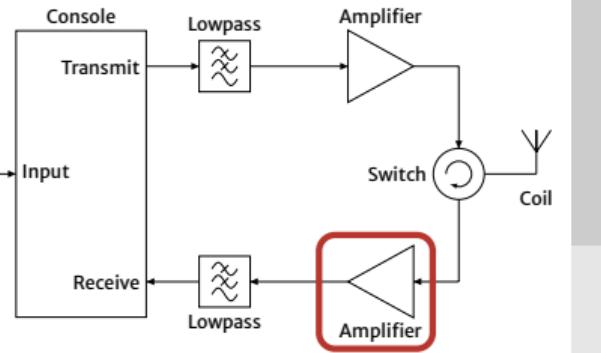

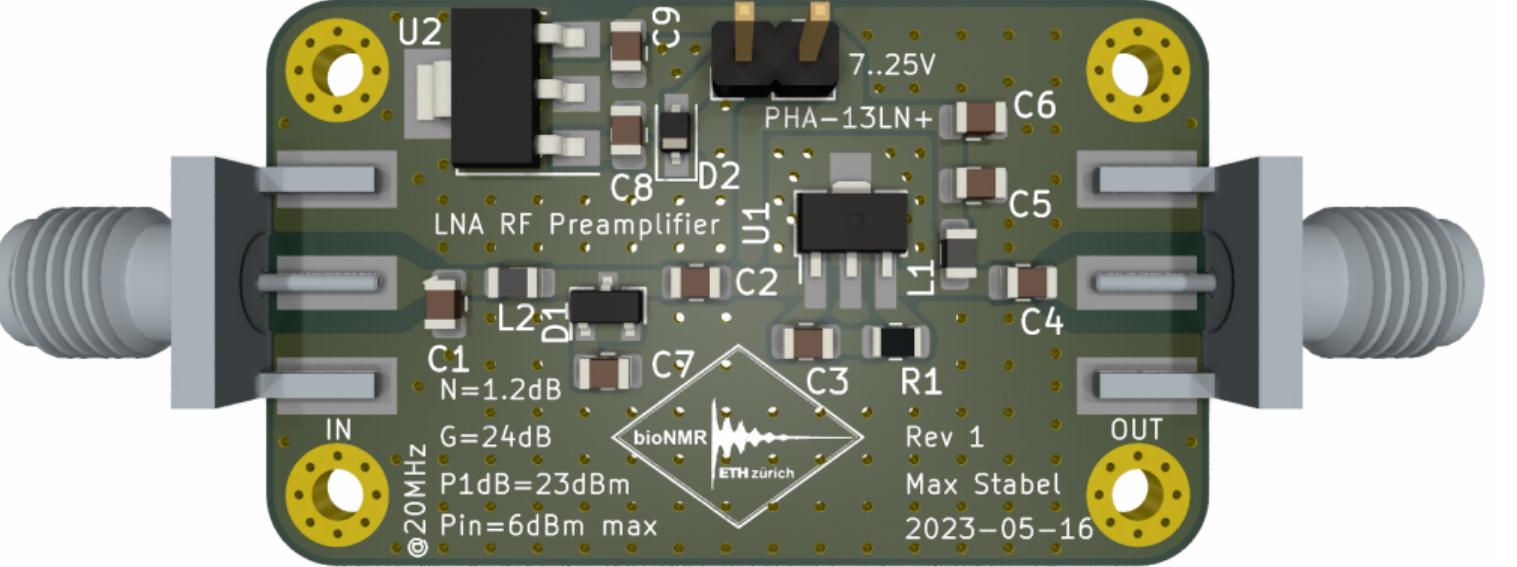

Power amplifier

1. We want cheap, so using a simple is the obvious first approach
2. Unfortunately there's a lot to do:
 - Input/Output Impedance Matching
 - Bias Tee
 - DC coupling
 - stability calculations
 - feedback
 - temperature compensation (current feedback)
3. A complete amplifier is quite expensive
4. Solution: Use monolithic (integrated) amplifier
5. Take care of heat dissipation (Class-A)
6. dB is logarithmic unit

The power amplifier has two stages

The low-noise amplifier had instability issues

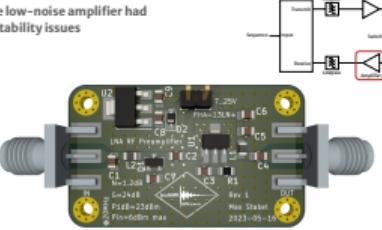

2023-09-12

magnETHical

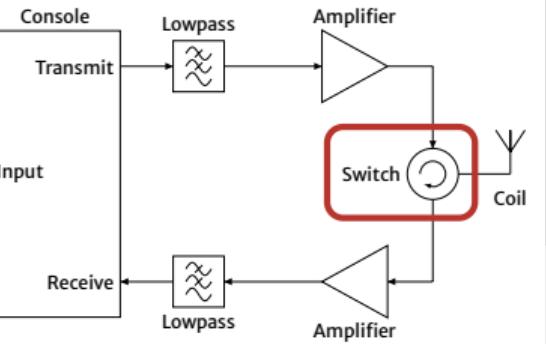

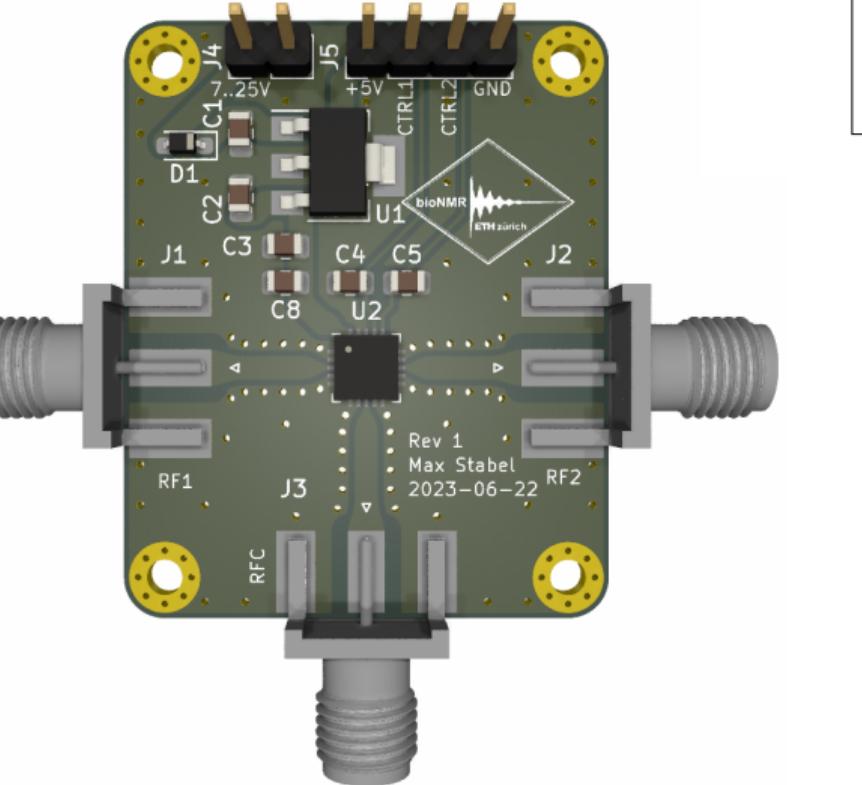

The parts

1. Low-noise
2. Feedback loop — stray capacitance
3. Solution: Smaller housing, shorter loop
4. We need 3x for enough gain

The low-noise amplifier had instability issues

We use a transistor-based active switch

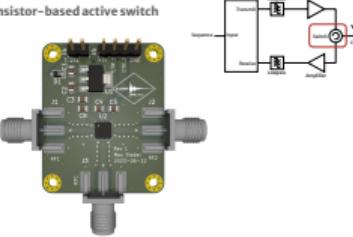

2023-09-12

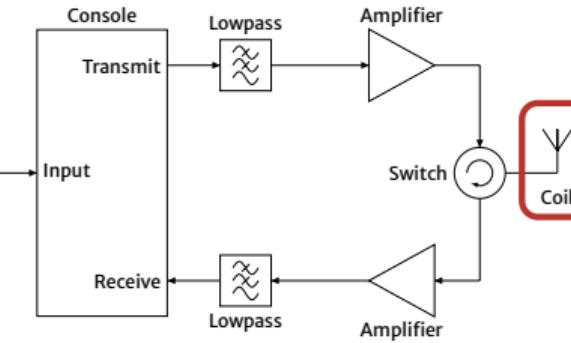

magnETHical

The parts

1. Active
2. Isolation: 60 dB
3. Silicon-on-insulator (not pHEMT GaAs) i.e. FET tech, not PIN-Diode
4. PIN-Diode switch also possible, but
 - usually higher leakage
 - slower switching
 - harder to integrate on a chip
 - but higher power capabilities

The probe

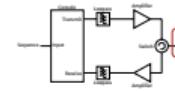

2023-09-12

magnETHical

The parts

1. Many turns — high inductance — low capacitance — sensitive to stray capacitance

A 32-channel current supply is designed but untested

2023-09-12

EXPERIMENTAL RESULTS

EXPERIMENTAL RESULTS

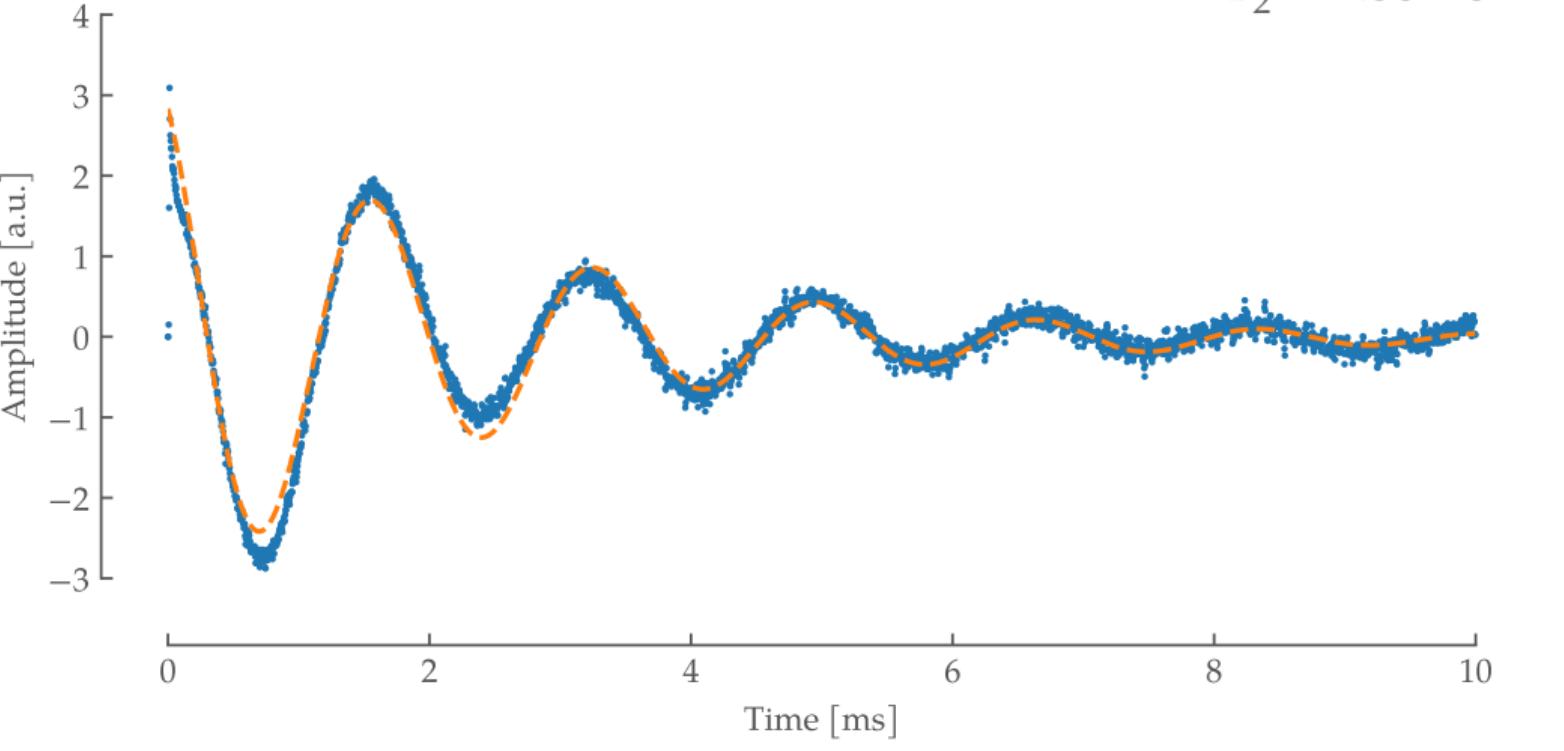

2023-09-12 *magnETHical*
└ Experimental Results

Simple Pulse Sequence

We can already see a water FID

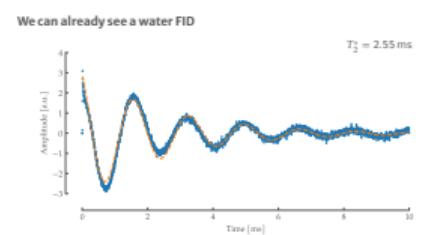

2023-09-12

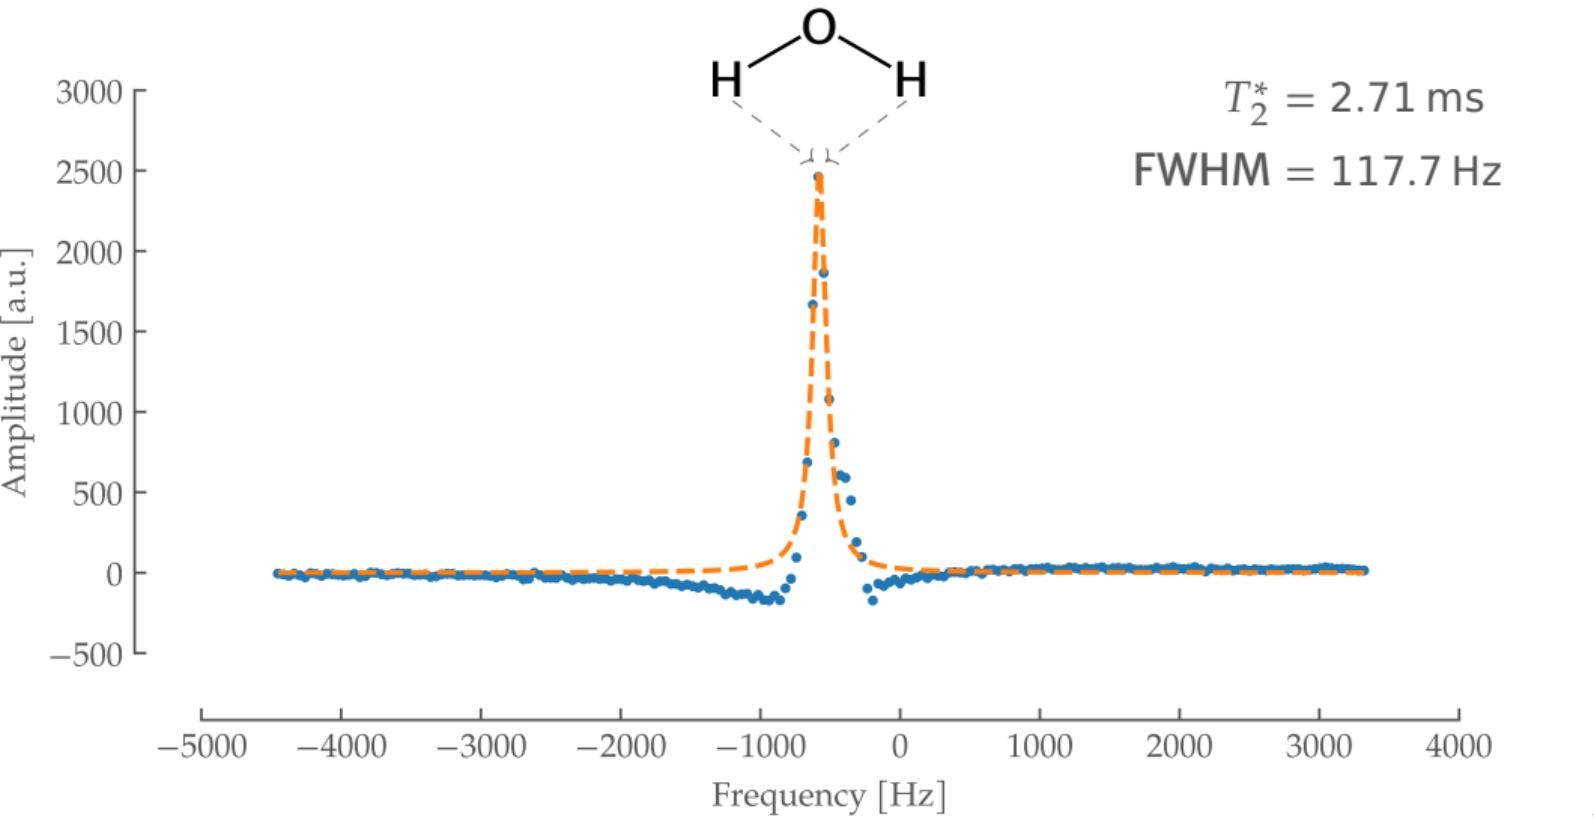

magnETHical

└ Experimental Results

1. Outliers at the beginning are due to CIC filters

...and do a Fourier transform

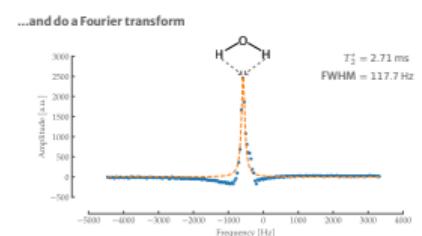

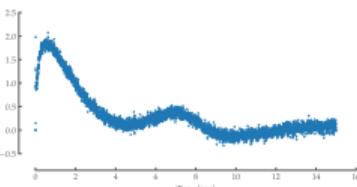

2023-09-12

magnETHical

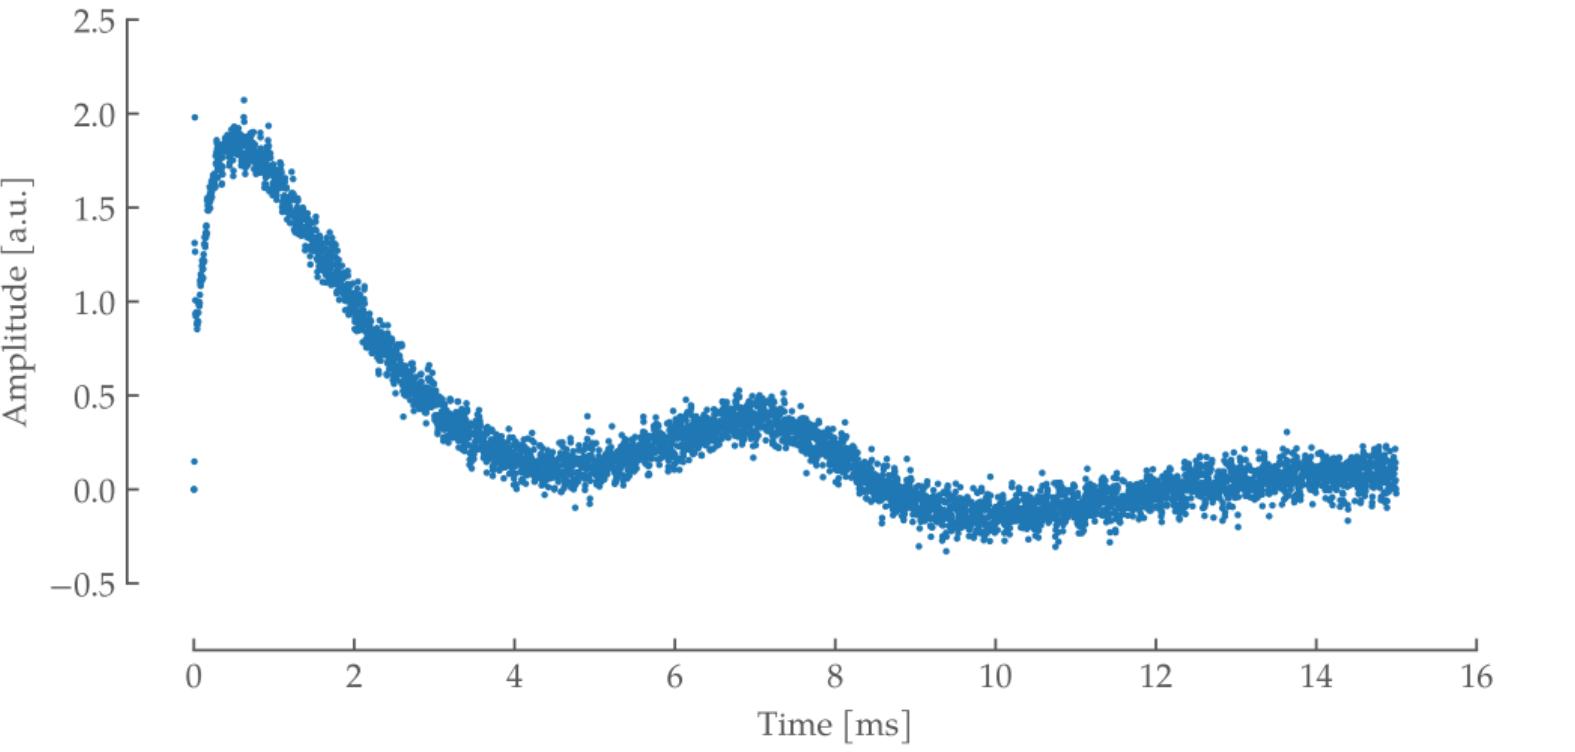

└ Experimental Results

1. Not Lorentz because of missing shimming/inhomogeneities
2. Measured input signal of -92dBm/15.8uV resulted in amplitude of 2200
3. SNR of around 350, With FWHM 2.5Hz/1ppm we estimate snr of 11000

Toluene also has a visible signal

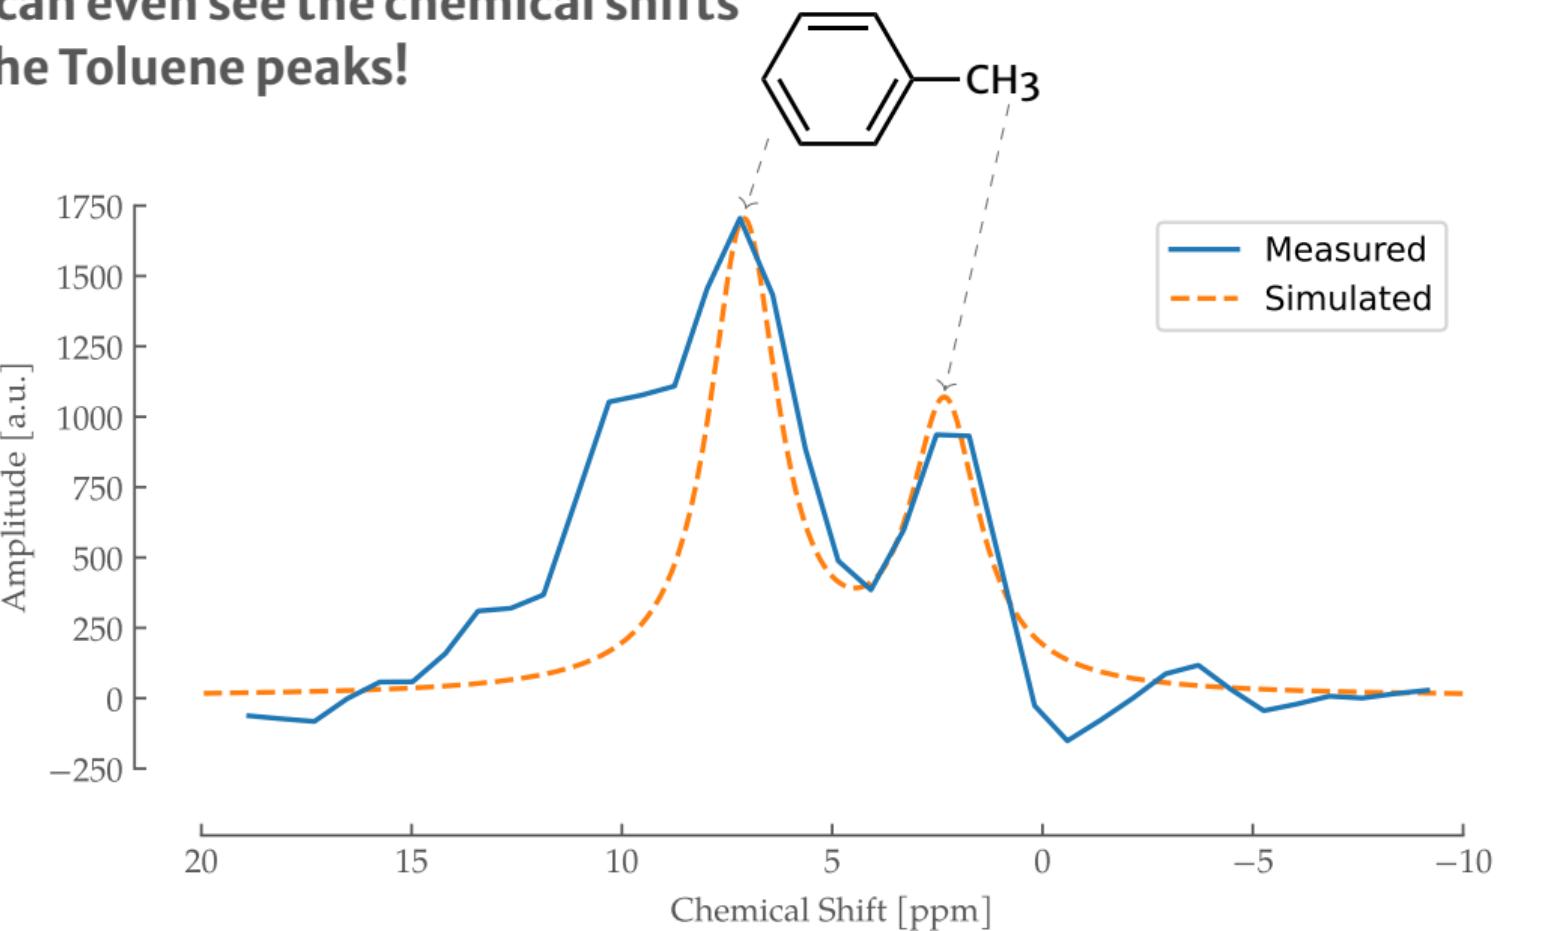

2023-09-12

magnETHical

└ Experimental Results

We can even see the chemical shifts
of the Toluene peaks!

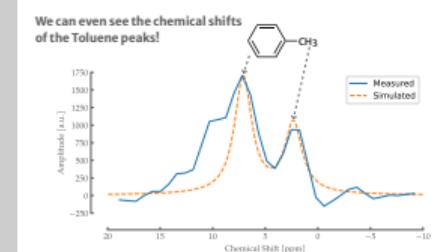

2023-09-12

magnETHical

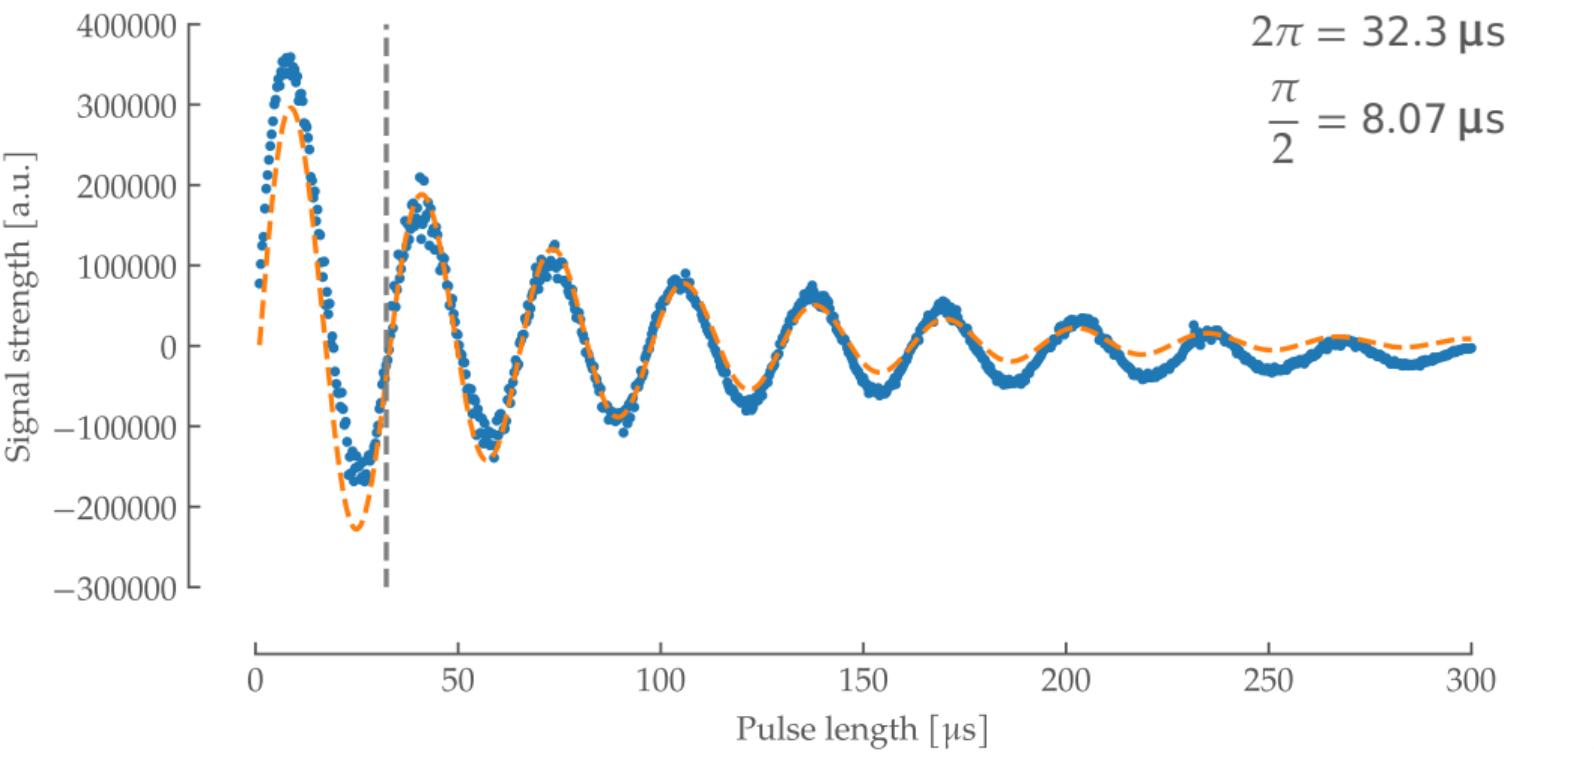

└ Experimental Results

It's a full tube of toluene, not a solution

1. Reasons for sidepeak: no apodization (truncation of FID), no shimming, inhomogeneities/not centred

Rabi nutation (pulse calibration) of water

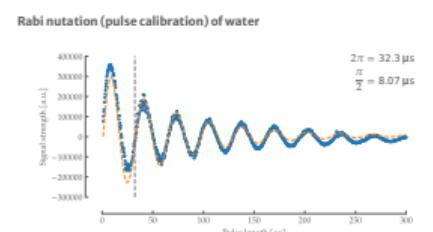

21

2023-09-12

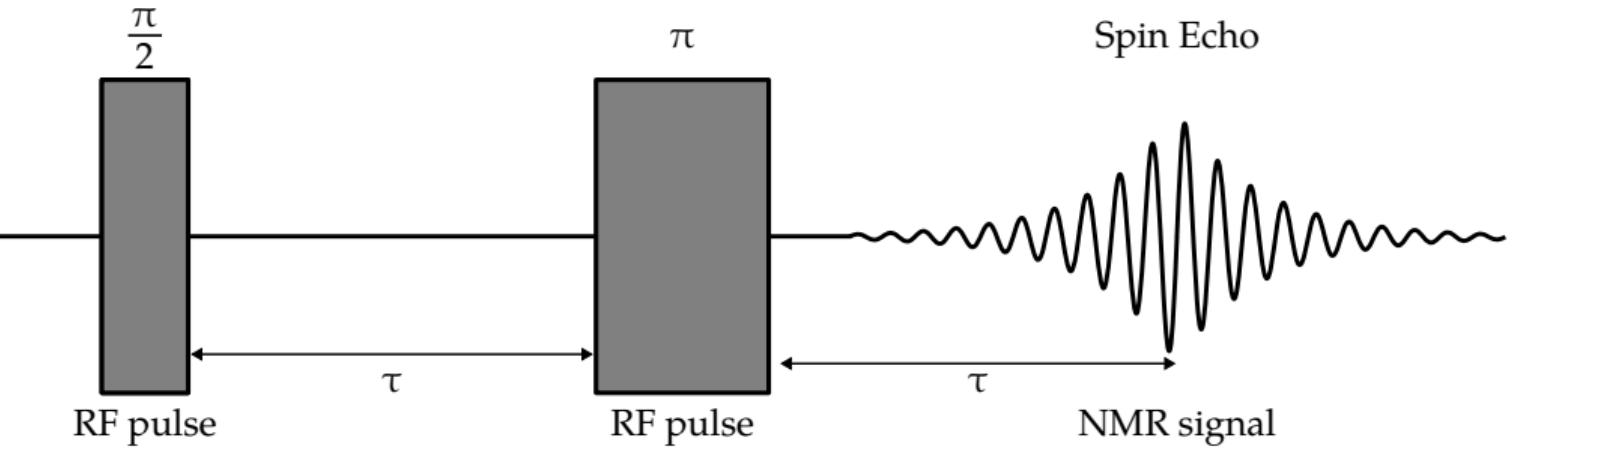

magnETHical

└ Experimental Results

1. $T_{period} = 32 \mu\text{s}$
2. $T_{\frac{\pi}{2}} = 8 \mu\text{s}$

“I have not yet lost that sense of wonder, and of delight, that this delicate motion should reside in all ordinary things around us, revealing itself only to him who looks for it.”

“There the snow lay around my doorstep — great heaps of protons quietly precessing in the Earth’s magnetic field.”

— E.M. Purcell

“I have not yet lost that sense of wonder, and of delight, that this delicate motion should reside in all ordinary things around us, revealing itself only to him who looks for it.”

“There the snow lay around my doorstep — great heaps of protons quietly precessing in the Earth’s magnetic field.”

— E.M. Purcell

1. Circling back to the beginning, I would like to end with a quote by E.M. Purcell
2. I wouldn’t have thought I would get a glimpse of this wonder that Purcell describes when starting my thesis here, but I’m glad I did.
3. And I hope none of you have lost it yet

Backup

An amplifier is basically just a transistor

- Transistor:
voltage-controlled current source
- higher voltage → higher current
 - higher voltage V_{R_C}
 - lower voltage V_{CE}
 - 180° phase shift

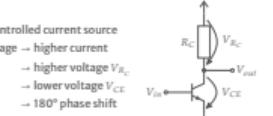

2023-09-12

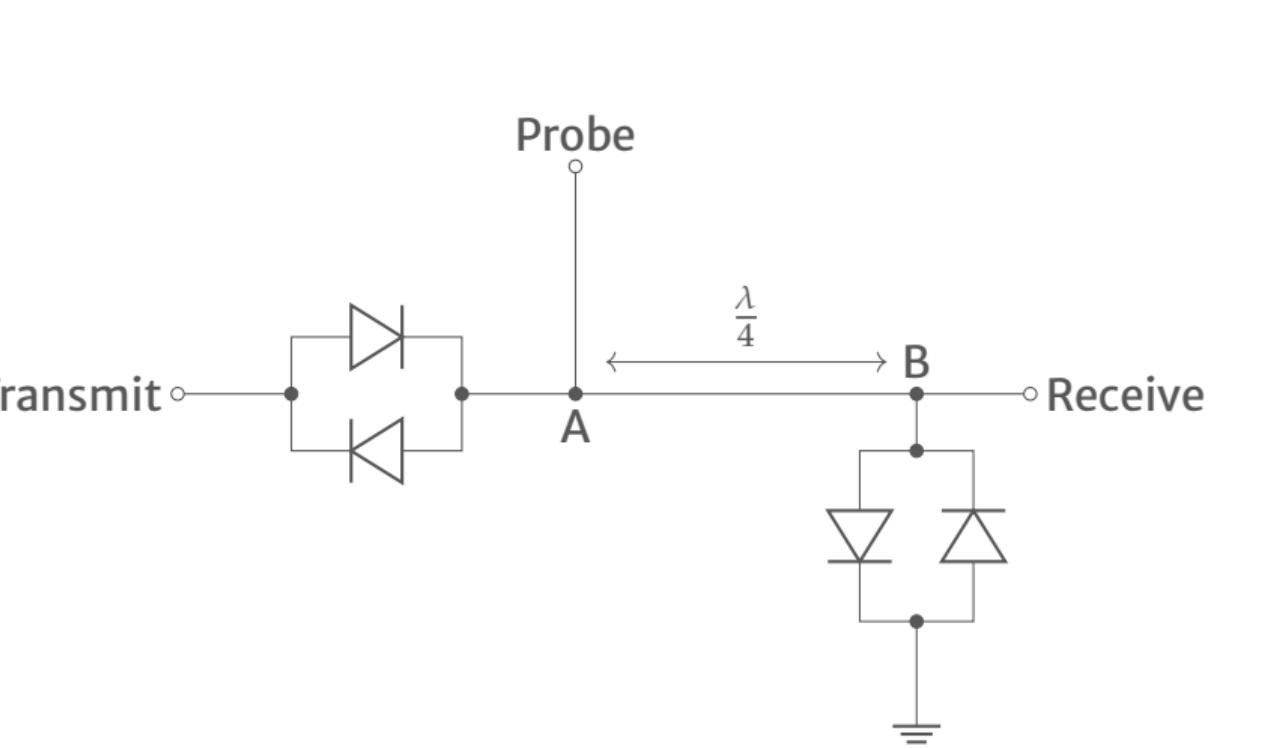

magnETHical

└ An amplifier is basically just a transistor

1. We want cheap, so using a simple is the obvious first approach
2. Unfortunately there's a lot to do:
 - Input/Output Impedance Matching
 - Bias Tee
 - DC coupling
 - stability calculations
 - feedback
 - temperature compensation (current feedback)
3. A complete amplifier is quite expensive
4. Solution: Use monolithic (integrated) amplifier
5. Take care of heat dissipation (Class-A)

The passive approach leaked too much power

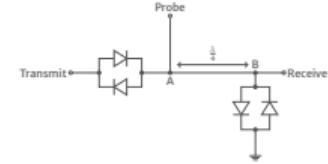

2023-09-12

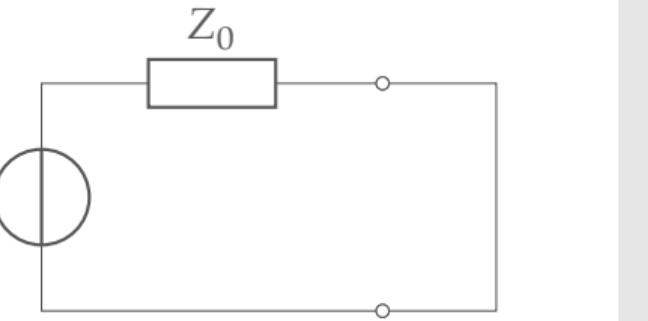

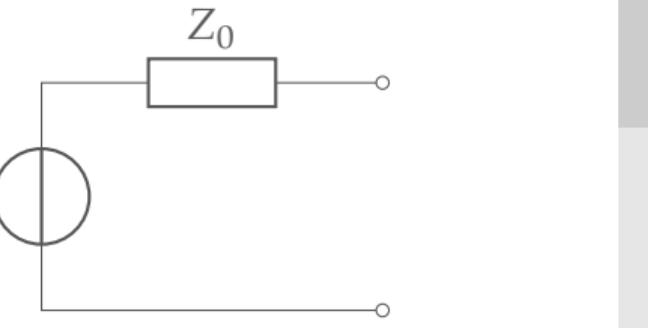

magnETHical

└ The passive approach leaked too much power

1. So called "video feedthrough"
2. Especially noise during reception phase, leaking through turned off amplifier
3. "Traditional" passive design by Lowe and Tarr
4. Leads to distortion of low-power pulses
5. Same design can be used with PIN-Diodes (effectively current-controlled resistor)
6. But PIN Diodes often need higher frequencies (mid MHz), size of intrinsic semiconductor
